(64) ON-LINE GAME SYSTEM AND METHOD FOR OFFERING REAL-TIME VOICE/VIDEO CHATTING SERVICE

(67) Abstract:

PURPOSE: An on-line game system offering a real-time voice/video chatting service and an application method thereof are provided to prevent the load and data delay between a game server and a chatting server by building a game server with a voice/video chatting server in an on-line game system. CONSTITUTION: The system comprises many user terminals(100), a game server(130), a chatting management server(140), and a database(160) for playing a game and chatting. The on-line game system is preferably separated from the chatting management server. Depending on the information provided from the chatting management server, many chatting management servers(150) appoint the session of voice/video data of the user terminals. An application program for integrating an on-line game program and a chatting program is installed in the user terminal. Upon running the chatting program, a program is operated in a memory of a video card of the user terminal. The game server offers a game service to an authenticated member and transmits the information of participant members and a game to the user terminal.
